 About phone

Daniel Jedzura/Shutterstock.com Some Android phones don't have a lot of storage, so you might run out of room for apps. If your device has an SD card slot, you can use that to expand the storage and have more room for apps. However, SD card support is more limited than it used to be. What You Need to Know Android apps are installed to your device's internal storage by default. If you have a microSD card, you can move some of your currently installed apps over to the microSD card. This is not supported by all apps, however. In fact, many don't support this feature at all. The state of SD card support on Android is a shell of what it used to be. Not only is it much harder to find Android devices with SD card slots, but the functionality has been greatly diminished as well. We'll show you what you might be able to do if you have a microSD card in your Android device. **Notes:** Running an app off your SD card will almost always be slower than running it off the internal storage, so only use this if you absolutely have to—and if you can, try to use it for apps that don't require a lot of speed to run well. **RELATED:** How to Free Up Storage Space on Your Android Phone How to Move an Android App to an SD Card First, swipe down from the top of the screen (once or twice, depending on your device) and tap the gear icon to open the Settings menu. Next, select "Apps." You may need to tap "See All [Number] Apps" for the full list of installed apps. Some devices show the full list right away. Select the app that you would like to move to the SD card. Next, on the App Info page, select "Storage" or "Storage & Cache." If the app supports moving to the SD card, you'll see a "Change" button. Tap it. A menu will pop up with the option to change the storage location to "SD card." Tap "Move" on the next screen to begin the exporting process. You'll see a progress bar during the process bar. When it's done, you'll be returned to the Settings app. Can You Install Apps Directly to the SD Card? Older versions of this article explained how to install apps directly to the SD card and move any app to it, whether it officially supported the feature or not. Unfortunately, as of 2022, that's no longer a feasible option on modern versions of Android. Some manufacturers—namely, Samsung and LG—previously allowed users to format microSD cards as internal storage. That meant apps and games would be installed there by default. Sadly, this feature is no longer present on newer devices. Technically, it's still possible if you're willing to go through the trouble of rooting your Android phone. In the past, this article recommended using apps that required root access, such as MiniTool Partition Wizard and Link2SD. Rooting an Android phone is not as worth it as it used to be. Android has gotten much better and the rooting process has only gotten more difficult. It's simply not a legitimate solution for the majority of people. Sadly, not many Android phones have SD card slots anymore, and it seems that even fewer apps support the ability to be moved to external storage. If you do have an SD card slot, you should take advantage of it. A 128GB microSD card that comes with an adapter for easily transferring files from your phone to computer. Samsung SD cards are highly regarded for their quality. Something went wrong. Wait a moment and try again. Android phones come handy not only by means of their easy-to-use features, but also because most applications on Android can be downloaded from the Google Play Store with just a few clicks. However, at times you need to download some apps from an .apk file extension that is from a source other than the Google Play Store. The 'App not installed' error is a very common issue that crops up when you try installing an app from any source other than the usual Google Play Store. Contrary to popular belief, this may not always be something related software or the app, it may rather have to do with the device. Read on to know more about when this issue occurs and how to fix 'App not installed' in Android phone. Why does 'App not installed' error occur? Corrupted Application- One of the most common reasons for 'App not installed' pop-ups is that of a corrupted file or it may be so that a few of the core files of the apps might have been modified. It is advisable to recheck files while installing and ensure not to download contained files. Insufficient Storage- If your Android device is too full, it causes the package installer to malfunction, leading to the 'App not installed' pop-up. Even a corrupted Internal Storage Card or an SD card which is not mounted properly may lead to clogged storage and thus give you the App not installed error message. Application Permission- At times, even without your knowledge there may be software applications running at the backdrop with set permissions not to allow any other third-party installation source to function which may also give the installation error message. Incompatible App Version- Google Play Store allows you to install the most stable versions of the applications that you are seeking to install. However, when you try installing from other external sources, it may lead to CPU incompatibility and may be versions that your phone is unable to support. Unsigned Applications- Applications that are not available on the Google Play Store are referred to as unsigned apps. However, this does not mean you cannot mean you have to let go of unsigned apps if they are blocked by default. There are ways to fix this issue as well. Once you know the reasons behind the 'App not installed' error, it will be easier for you to fix the issues as well. Let us check how to fix the 'App not installed' in Android Restart your Android phone- One of the first things to do to resolve the issue is to restart your Android phone. In order to restart, it is advisable to close all the running apps and then hold on the power button for long to restart your device. This should solve most of the errors that your device is facing. Install from Reliable Sources- When installing an app be sure to install it from a secure and reliable source which generally occurs on the top of the search engine. As you go down, you may become victim to malicious sources which may harm your device. You may also try transferring the app that you installed into your device's root directory and install the app again, especially if yours is an older Android version. Check storage location- In most cases, downloading the app on an external mount such as an SD may lead to the error pop-up. It is therefore, best to install any third-party app on your internal storage as the mobile's package installer enables you to accept the files without any issues. In case your internal storage is not available, you have to rely on your external storage or clear your internal storage. In order to do the latter, it is best to move all the large files in your mobile to the SD card or you could also store it on other locations such as Drive and then try reinstalling it. Clear Cache- The easiest way to clear Cache is to use your pre-installed Phone Manager or install it from Google Play Store. In case of older versions of Android, you need to go to the Settings- Manage Apps - System Apps- Package Installer App. You will be redirected to Clear Data and Clear Cache options which would solve your problem. Unknown Source Application Permission- In order to allow applications from unknown sources, go to the Security tab under Settings which will lead you to Unknown Sources tab. Enable this to allow third party installations to take place seamlessly. Other ways to fix the 'App not installed' issue include removing the SD card while installing the app, or deleting .android_secure/smdl2impl.asec from the SD device, uninstalling similar versions of the app that you wish to install or install ZipSigner, which is a trusted app for signing the file from the Input/Output tab on the app and your unsigned app issue will be fixed. So the next time you get irked with the pop-up, you would know just how to fix 'App not installed' in Android and get going with your installations without any hassle. It seems that there is no end of experiencing errors on Android phones and its somewhere true because everyday users are some of the other error on their devices. Recently few users have reported about "App not installed" error message on their Android devices. Generally, it occurs when users try to install an APK that is not available in Google Play Store. Though you cannot say that it's a software or hardware issue but it completely depends on your device usage. However, this is not a new thing that users come across several issues or errors and especially when you try to install APK from a third-party source. So this issue can continue in the future as well, so it's better to find out some best fixes for it. Here in this blog, you will get some efficient ways to resolve app not installed on Android along with the common causes. To Fix App Not Installed Error On Android, we recommend this tool: This effective tool can fix Android issues such as boot loop, black screen, bricked Android, etc. in no time. Just follow these 3 easy steps: Download this Android System Repair tool (for PC only) rated Excellent on Trustpilot. Launch the program and select brand, name, model, country/region, and carrier & click Next. Follow the on-screen instructions & wait for repair process to complete. But before knowing how to fix app not installed APK error, let's take a look at one of the real user's examples. Practical Scenario: Hello, The first time I built the app in the App Center, the apk file created was successfully installed on Android 8.1.0. However, after I changed to release variant and enabled the "Sign builds" option, the created apk cannot be installed and the system just showed me the error message "App not installed". Does anyone know what might be happening? Regards, Vinicius Alves - Siemens From Mendix.com-forums What Causes App Not Installed On Android? Some common causes include: Insufficient storage space is one of the main culprits for such error to occur When SD card is mounted on an Android phone, then there is a chance to come across apps not installed error message If the storage location is corrupted like SD card then it may happen that it popups an error message When the apps are downloaded from other sources and not from Google Play Store While installing any app, you need to accept specific permissions and if you deny them then Android app not installed error will popup Some apps are installed only on the phone's internal memory and when the app does not find the proper location then users can come across such error message When APK file is corrupt then it happens to show you an installing message So these all are the major causes for App not installed error Android. Now it's time to go through the solutions that will help you further to resolve the error. How To Fix App Not Installed On Android Phone? Now you will get some fixes that have the potential to resolve "App not installed" error on Android. Go through every solution and see which one works for you. Solution 1: Restart Your Android One of the common but effective ways to fix the error is restarting your Android phone. This is a basic step that everyone should know. It can solve any kind of glitches that occur on Android phones. What you have to do is: Hold Power button for a few seconds Then you will see Power off, Restart, and other options on screen. Choose Restart option and wait for few seconds until the device restarts completely. And now check if the same problem is popping up again, if yes then go to the next solution. Solution 2: Check App Location Whatever apps you install on your phone, some are installed on internal memory whereas some are on SD card. Therefore, you should check the file location first when you come through such error message: Here is what you have to do: First, go to Settings > open Storage Under Storage > you will get internal storage and SD card. Check out the app location and move it to the other storage to fix app not installed error message Also Read: 10 Ways To Fix Installed Apps Not Showing in Play Store Solution 3: Use Only Google Play Store you should know that Android users are offered Google Play Store to download unlimited apps as it has trusted and safe ones. But sometimes, few apps might not be available on Play Store and users have to install them from third party source. This is risky one and you might come across "Android App not installed" error message. Third party APK can have virus that may infect your phone and several other issues as well. So it's better to stick to Play Store and download as many apps you wish for without going for third party source. Solution 4: Clear Data And Cache Of

Package Installer Even the error you are coming across can be due to cache of the package installer on your phone. So once you should clear out data and cache of it. The steps are as follows for how to fix app not installed on Android 11: First, go to Settings > Manage Apps Now under System apps > check the package installed You will get Clear Data and Clear Cache option Click on both the options one by one and hopefully, this will make your device error-free. If not, then move to the next solution. Solution 5: Sign The Unsigned App You need to sign the unsigned app that can help you to deal with the error message. For that you need to download ZipSigner app from Google Play Store. Here are the steps you should follow: First, download and install ZipSigner app from Play Store After launching the app, you will get the app dashboard There you have to click on Choose input/output After that, click on Sign The File option Now wait for the process to finish and install the signed APK after that Solution 6: How To Fix App Not Installed Problem By Disabling Google Play Protect Google Play Protect is one of the useful features that stop you from installing apps from third-party source. If you try this then you can get App not installed error message. But to remove such error message, you can disable Google Play Protect by following the below steps: Open Google Play Store on phone and click on "Hamburger" icon Then search for "Play Protect" and open it Now on "Play Protect", tap on "Settings icon" at top right There you will get an option to disable "Scan device for security threats" by click on toggle button And now you can install any apps that you want. Also Read: Android Apps Crashing? Here's How To Fix This Android System WebView Issue! Solution 7: Reset App Preferences First, go to Settings on phone > click on "Apps & notifications" Now on All Apps tab, click on three-dot at top right corner Then click on "Reset App Preferences" There you will get a popup box in which you have to click on "Reset Apps" That's it...Now install any app and see if the same error occurs again or not Solution 8: Mount Your SD Card Another possible cause for the error can be your SD card that might not be inserted properly. This can happen very often and you can see app not installed error message. Therefore you should check whether SD card is properly accessible or not by following the steps below: First, go to Settings > open Storage Now look for storage info and you will get Mount SD card option > click on it That's it, after that check for the error is resolved or not Solution 9: Allow Apps From Unknown Sources When you install any third party apps on your phone then you have to allow apps from unknown source. But have to do it manually. The steps are as follows: First, go to Settings > Security > Unknown sources Now here click on enable option so that the user can install apps from unknown sources. And that's it, now whenever you will try to install any apps from unknown sources, it will not display any error. Also Read: Fix Apps Keep Crashing On Android Devices With 13 Quick Ways Solution 10: Delete Unwanted Applications Your phone might have several apps and among them, leaving few others are just installed but not in use. It happens many times but its not good for your device health and can suffer you from several error messages. So simple solution is remove those unwanted apps from device. First, go to Settings > open Apps Check the list of apps that you don't need any more Now choose those apps and click on it You will get a Delete option, so just tap on it and the app will be removed Solution 11: Format SD Card It might happen that your SD card is totally damaged or corrupted and this can be the cause of Apps not installed error message. So you should format it either on device itself or by externally. What you need to do is go to Settings > select Storage > click on "Format SD Card" and once again mount it to smoothly use it. Solution 12: Change App Codes To get out of the error message, you can also change some App codes by following the below steps: First, Download APK Editor from Play Store Now open the APK editor and tap on "Select APK from APP" or "Select an APK File" Then look for app and tap on common edit option. After that, change app version to older one compatible with your device. And at last, app those changes in app. Now uninstall any same pre-installed app and install the modified app Solution 13: Avoid Installation From SD Card Many times, the APK gets downloaded on SD card or you might try to install it from external mount then it may show you error because of contamination of file. This is because the installer might not parse the package from mounted storage. So in this situation, the best solution you can do is download APK in your internal storage and install it. Your phone will accept the file without error. Solution 14: Factory Reset Android Phone When nothing goes on your way, then only one thing is left and that is "Factory Reset". This can solve app not installed error on your phone. Just follow the below steps to factory reset Android phone: First, open Settings > move down to "Backup & Reset" Now click on "Factory data reset" Then click on Reset phone > Erase everything If its password protected then enter the password And now the process begins and after it is finished, you should try to install your apps on device. Hopefully, Android app not installed error will not come again. Alternative Way To Fix Android App Not Installed Error Another best way to deal with App not installed error is by using Android Repair. This is a professional tool that helps to fix any kind of issue on Android phone. Some of the error that this tool can fix is Black screen of death, app keeps crashing, setting has stopped, Stuck on boot loop and others. With a simple 1 click, your Android phone can become normal. and using this tool, there is a high chance of fixing any kind of Android errors. btn_img Conclusion So here I have discussed 15 best ways to resolve "App not installed" error on Android and hope that following them will surely help to get rid of the error. Do remember that whenever you wish to download any app then choose Google Play Store as this is the best and safe way to download and install any apps on Android. You can also use Android Repair software as an alternative method to fix App not installed. Henry Morgan is a professional blogger who loves to write blogs about Android & iOS related topics.
